Question 1. (Single Select)

Your company-managed kanban project has a total of six statuses in the workflows. Which statement about the kanban board is true?

- A: The board must have at least six columns.
- B: The board can include only statuses that are in even/ workflow.
- C: The board can have multiple in Progress statuses, from different workflows, mapped to the same column.
- D: The board must have the backlog and epic panel enabled.

Correct Answer: C

Explanation:

In a company-managed Kanban project, the board can have multiple In Progress statuses from different workflows mapped to the same column. This allows teams to visually group similar types of work even if the statuses come from different issue types or workflows. It provides flexibility without requiring one column per status.

Question 2. (Multi Select)

You are the project administrator of two Scrum projects, MOBI and TIS.

Team members find it difficult to switch between both projects to work on separate sprints.

They need the ability to work on issues from both projects in a single sprint.

Identify two ways that you can satisfy this requirement. (Choose two.)

- A: use the Filter Results dashboard gadget to show both MOBI and TIS issues
- B: add a quick filter to the board in MOBI to show issues from TIS
- C: create a new Scrum board that includes both MOBI and TIS issues
- D: base swimlanes on MOBI and TIS projects
- E: change the TIS project board filter to include issues from MOBI project

Correct Answer: C, E

Explanation:

Create a new Scrum board that includes both MOBI and TIS issues: This allows the teams to plan and manage sprints using a single board that pulls issues from both projects.

Change the TIS project board filter to include issues from MOBI project: Modifying the board filter to include issues from both projects enables the board to support a shared sprint across MOBI and TIS.

Question 3. (Multi Select)

Teams using Project A and B currently use their own respective Scrum boards.

They must now work together on the same products and issues and in the same sprints.

You created a new Scrum board based on this filter:

project in (A,B) ORDER BY Rank ASC

You must also check two settings to make sure the teams can access and use the new board.

Identify the two settings. (Choose two.)

- A: application access of all team members
- B: global permissions of all team members
- C: availability of parallel sprints
- D: sharing on the board sub-filter
- E: sharing on the board filter
- F: project permissions

Correct Answer: E, F

Explanation:

Sharing on the board filter: The board filter must be shared with all users who need access to

the board; otherwise, they won't be able to view or use it.

Project permissions: Users must have the necessary permissions (such as Browse Projects and Manage Sprints) on both Project A and Project B to view issues and manage sprints on the new shared board.

Question 4. (Single Select)

Your team needs a new board that:

- ☐ only shows issues that are actively in progress
- ☐ allows a separate area to prioritize incoming work
- ☐ allows them to release issues from the Done column

Identify the correct solution to meet these requirements

- A: Create a scrum board and enable the backlog!
- B: Create a scrum board and configure swimlanes.
- C: Create a kanban board and enable column constraints.
- D: Create a scrum board and configure a quick filter.
- E: Create a kanban board and enable the backlog.
- F: Create a kanban board and configure swimlanes

Correct Answer: E

Explanation:

A Kanban board with the backlog enabled meets all the requirements: it shows only in-progress issues (via column configuration), provides a separate area to prioritize incoming work (the Kanban backlog), and allows for releasing issues from the Done column (via version management or Kanban releases).

Question 5. (Single Select)

A team needs a board that meets these requirements:

- All issues can be moved across the entire workflow on a single view
- Issues can be worked in a continuous flow without start and stop dates

Which board configuration meets the requirements?

- A: Kanban board without backlog
- B: Scrum board without parallel sprints
- C: Scrum board with swimlanes
- D: Kanban board with backlog

Correct Answer: A

Explanation:

A Kanban board without backlog displays all issues on a single view and supports a continuous workflow without start and stop dates. This setup is ideal for teams using a continuous delivery process, allowing issues to move freely across the entire workflow.
